Milan, 18th February 2008

**OFFICIAL PRESS RELEASE**  
**THE PROFILE OF ARGO, AN EUROPEAN GROUP MADE IN ITALY**

**AER.FI** is an European Group of economical interest, consisting of Argoclima S.p.A. and Technibel S.A. that operates in the sector of air conditioning for the comfort of people, primary and complementary heating and air treatment through the synergy between two brands, **Argo** and **Technibel**.

**Argo** is the brand of Argoclima S.P.A., a trading company located in Gallarate (VARESE). Argoclima S.P.A. is essential part of the Group and is mainly involved in the distribution of products, through a specialized sales network.

**Technibel S.A.**, based in Trévoux (LYON), distributes its products with the same brand.

The companies of the Group interact among each other within common strategies and pursuing synergies.

The group moves with the purpose of **valorization of quality**, which is considered the main reference in all industrial processes, starting from strategic marketing, crossing research and development, production, logistics, management control and allocation of financial resources, communication, trading and finally after sales services.

The laboratories of Research and Development are located in the Northern Italy and in Central France; the laboratories of Research and Development of the Group are constantly involved in the design of direct expansion air conditioning systems, whilst French laboratories focus they interest in the study and manufacture of water systems.

The group has two different production sites, both are ISO9001 certified. In factory of Gallarate (Italy), there are five production lines, automatic painting departments, the production of heat exchangers, presses for metallic parts and some robots for welding and automatic assembly. In Trévoux (France), the production isle are specialized for medium and big chillers/water heat pump and products for special applications in industrial air treatment.

**Argo** is the signature of Italian production, featuring elements that assert themselves through proposals of quality and are very competitive, that mark meaningful goals in terms of technological innovation of the reference sector.

**Argo** and **Technibel** offer to the market advanced and unique solutions thanks to a strategy based on:

- **the analysis of the specificities of the market**
- **attention and care of details**
- **continuous research of innovative solutions**
- **cooperation with Universities and private institutes**
- **use of highly distinguished materials**
- **excellence in industrial design**

The products and air conditioning systems, heating and air treatment are designed in the laboratories of the Group, with a range from 1 to 150 kW of refrigerating/thermal power and are destined to residential and commercial applications, such as restaurants, hotels, offices, schools, hospitals, the tertiary sector in general.
